Edge Computing Architecture

Achari Kakinada

Director Wireless R&D
Charter Communications

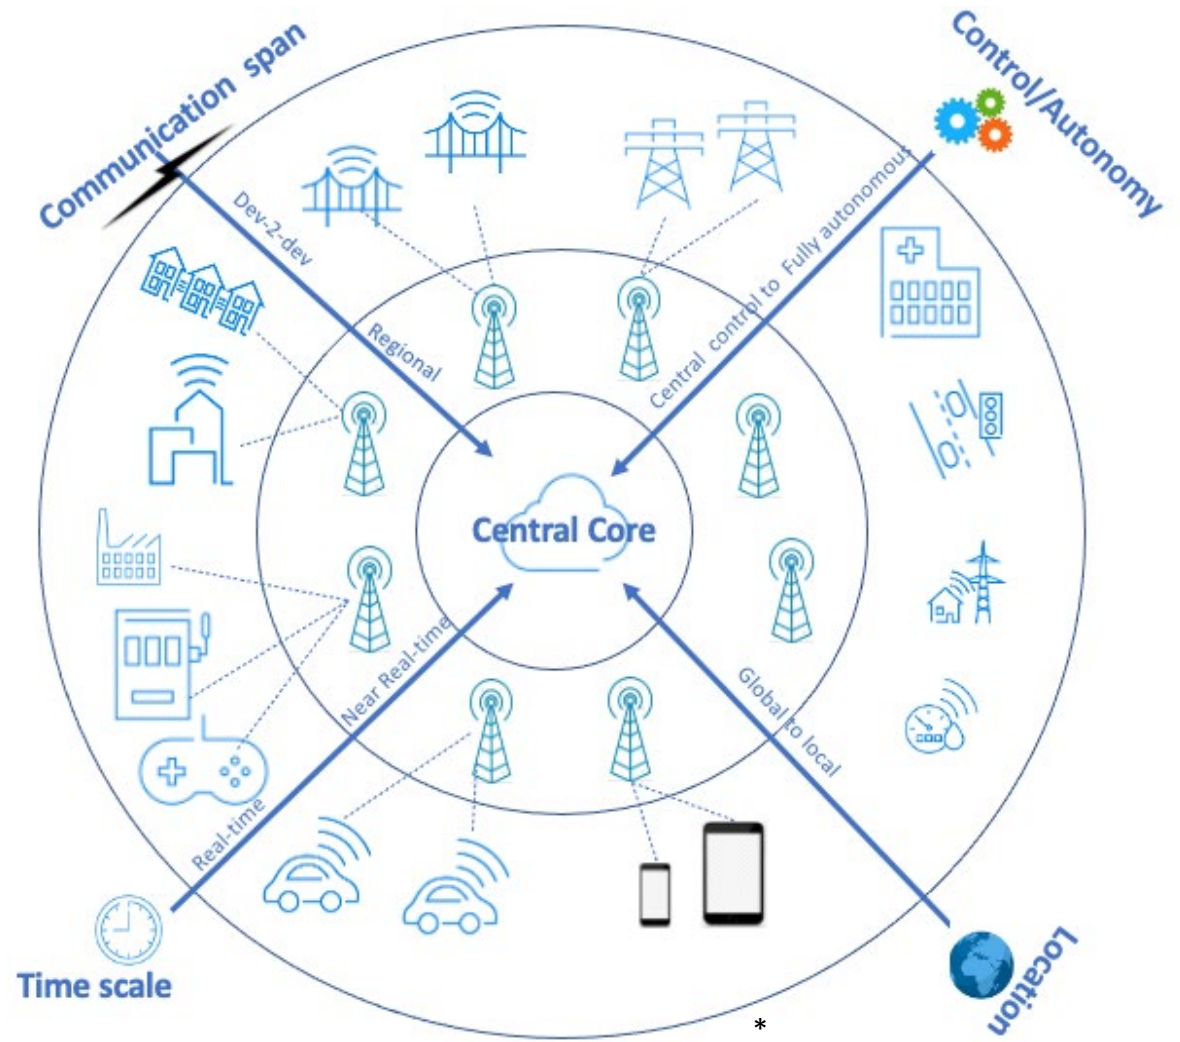

- Mission critical applications from many verticals need ultra low latency
- Much of data needs local processing to address
 - context awareness
 - autonomy in decision making
 - meet the latency demands
- Enable administrative domain generating data to enforce policy
- By the year 2025, 150 zettabytes of data need to be processed and over half of it comes from edge device. Minimize transport overhead

* Adapted from Gartner, 2021 Strategic Roadmap for Edge Computing

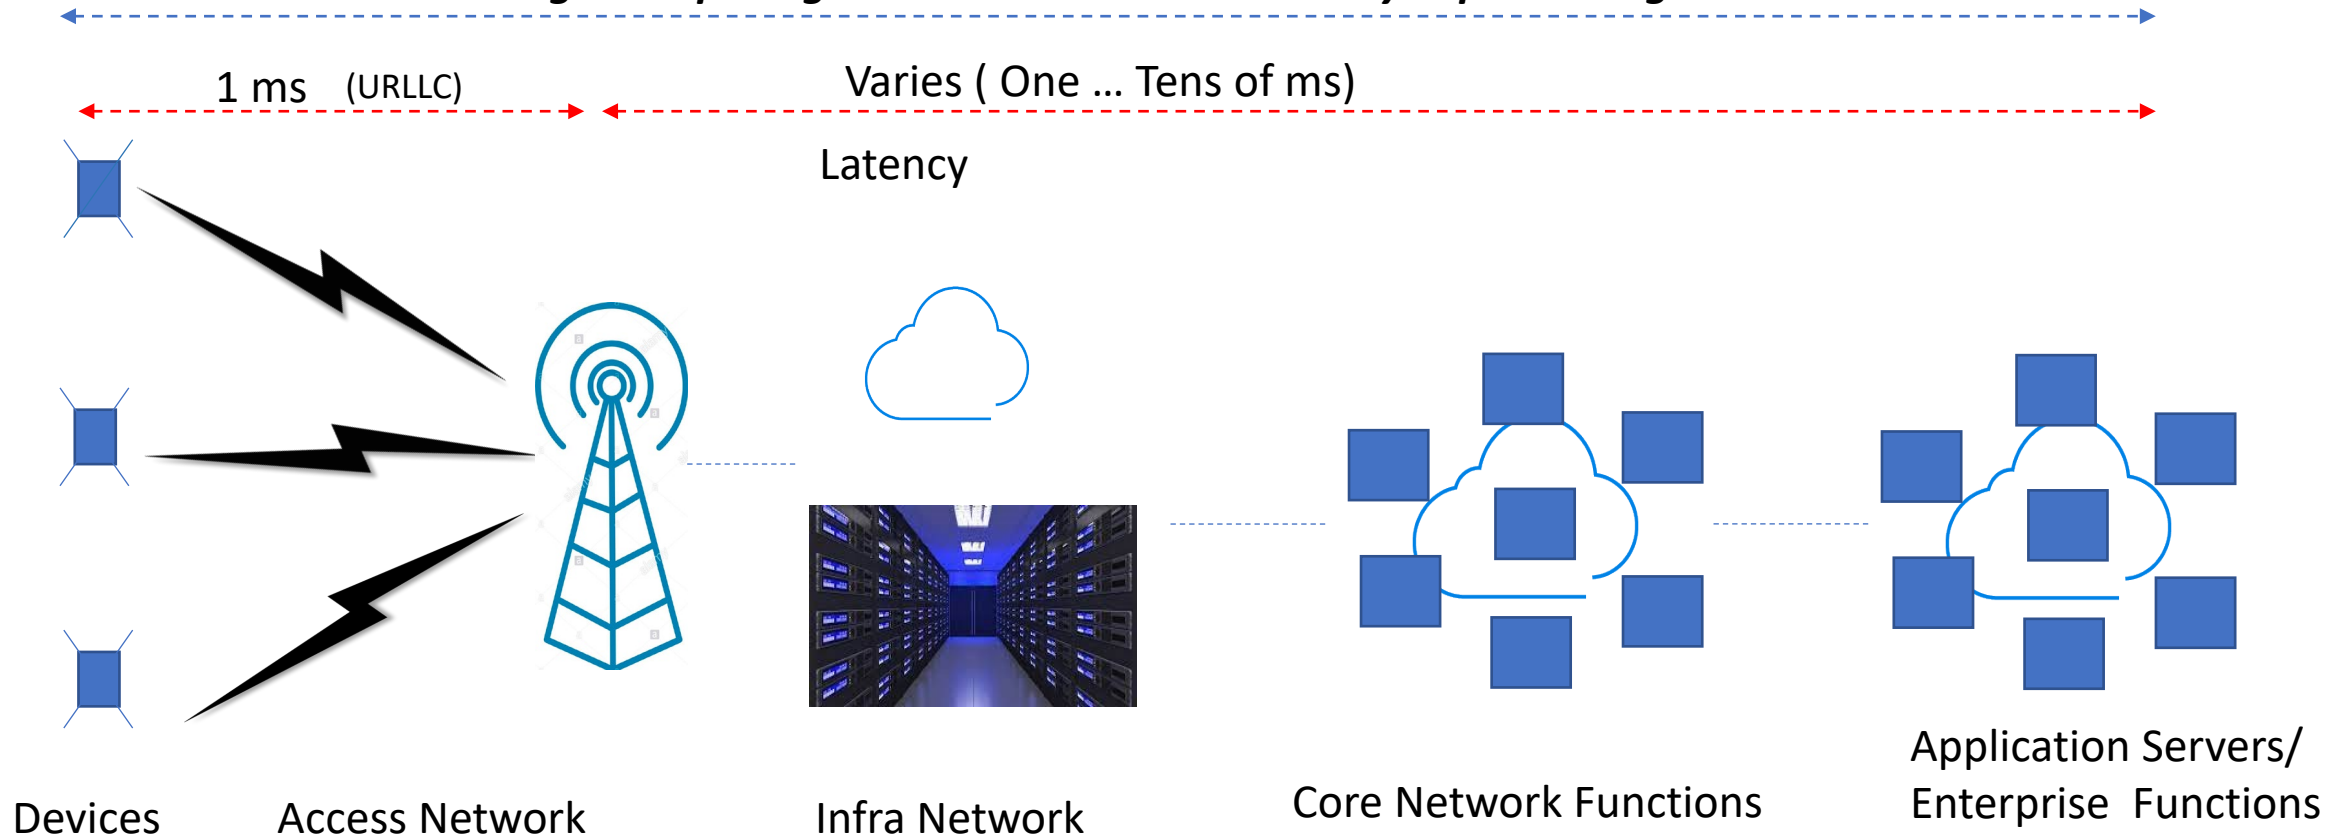

DIMENSIONS OF EDGE COMPUTING

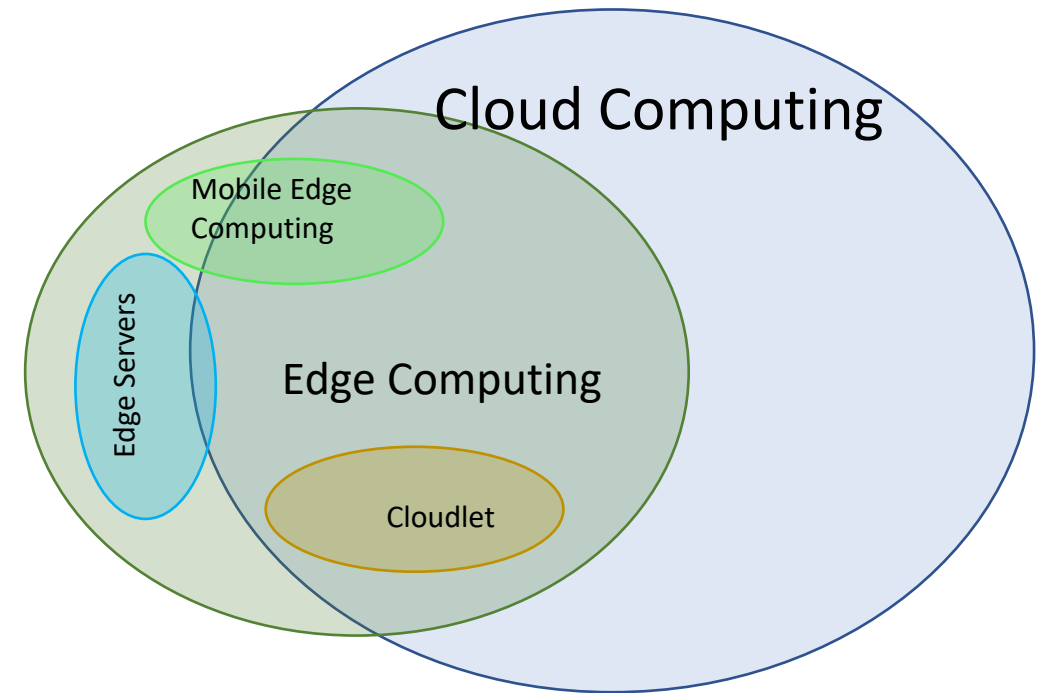

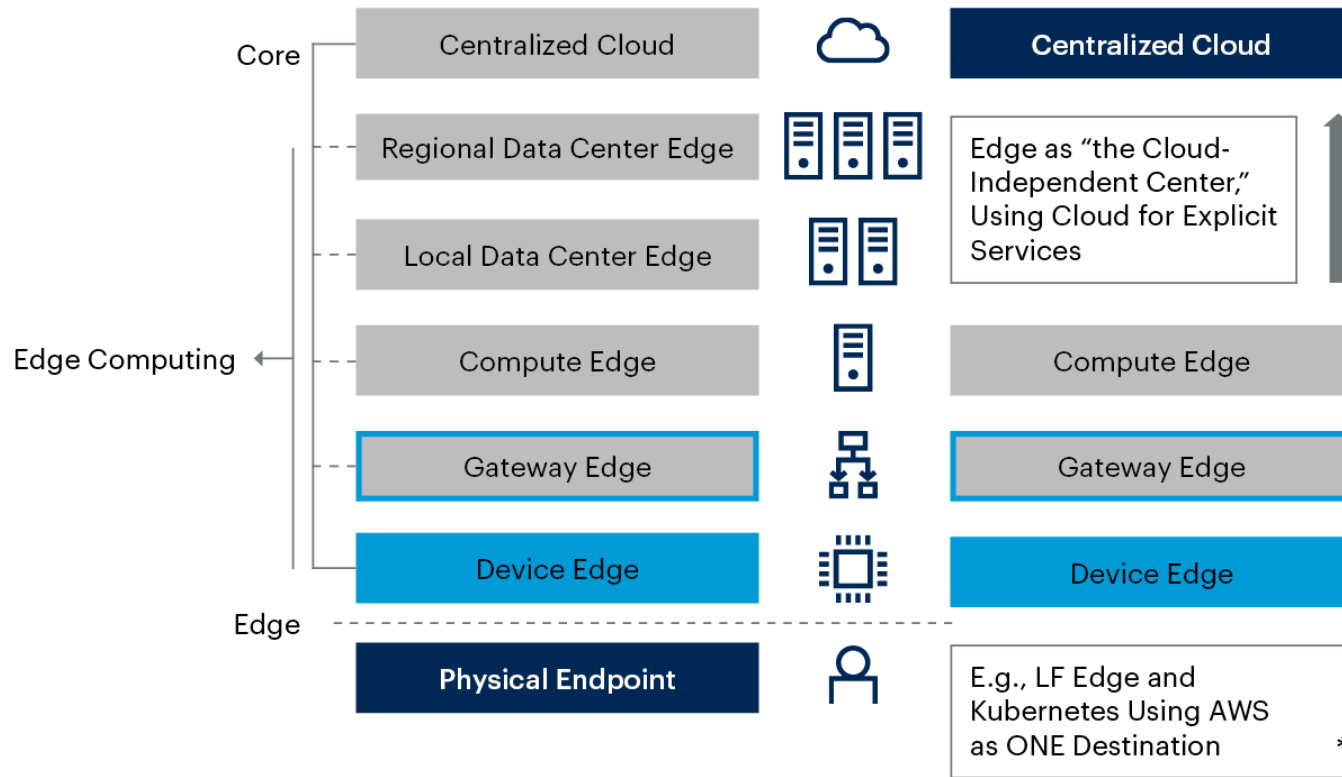

- Time
 - Real time, near-real-time, non-real-time
- Location
 - Location awareness/accuracy needed
- Control/Autonomy
 - Local vs. Central
- Communication span
 - Device to device (D2D), regional, global
- Many use cases across different verticals benefit from this
 - Smart cities
 - Industry 4.0
 - AR/VR

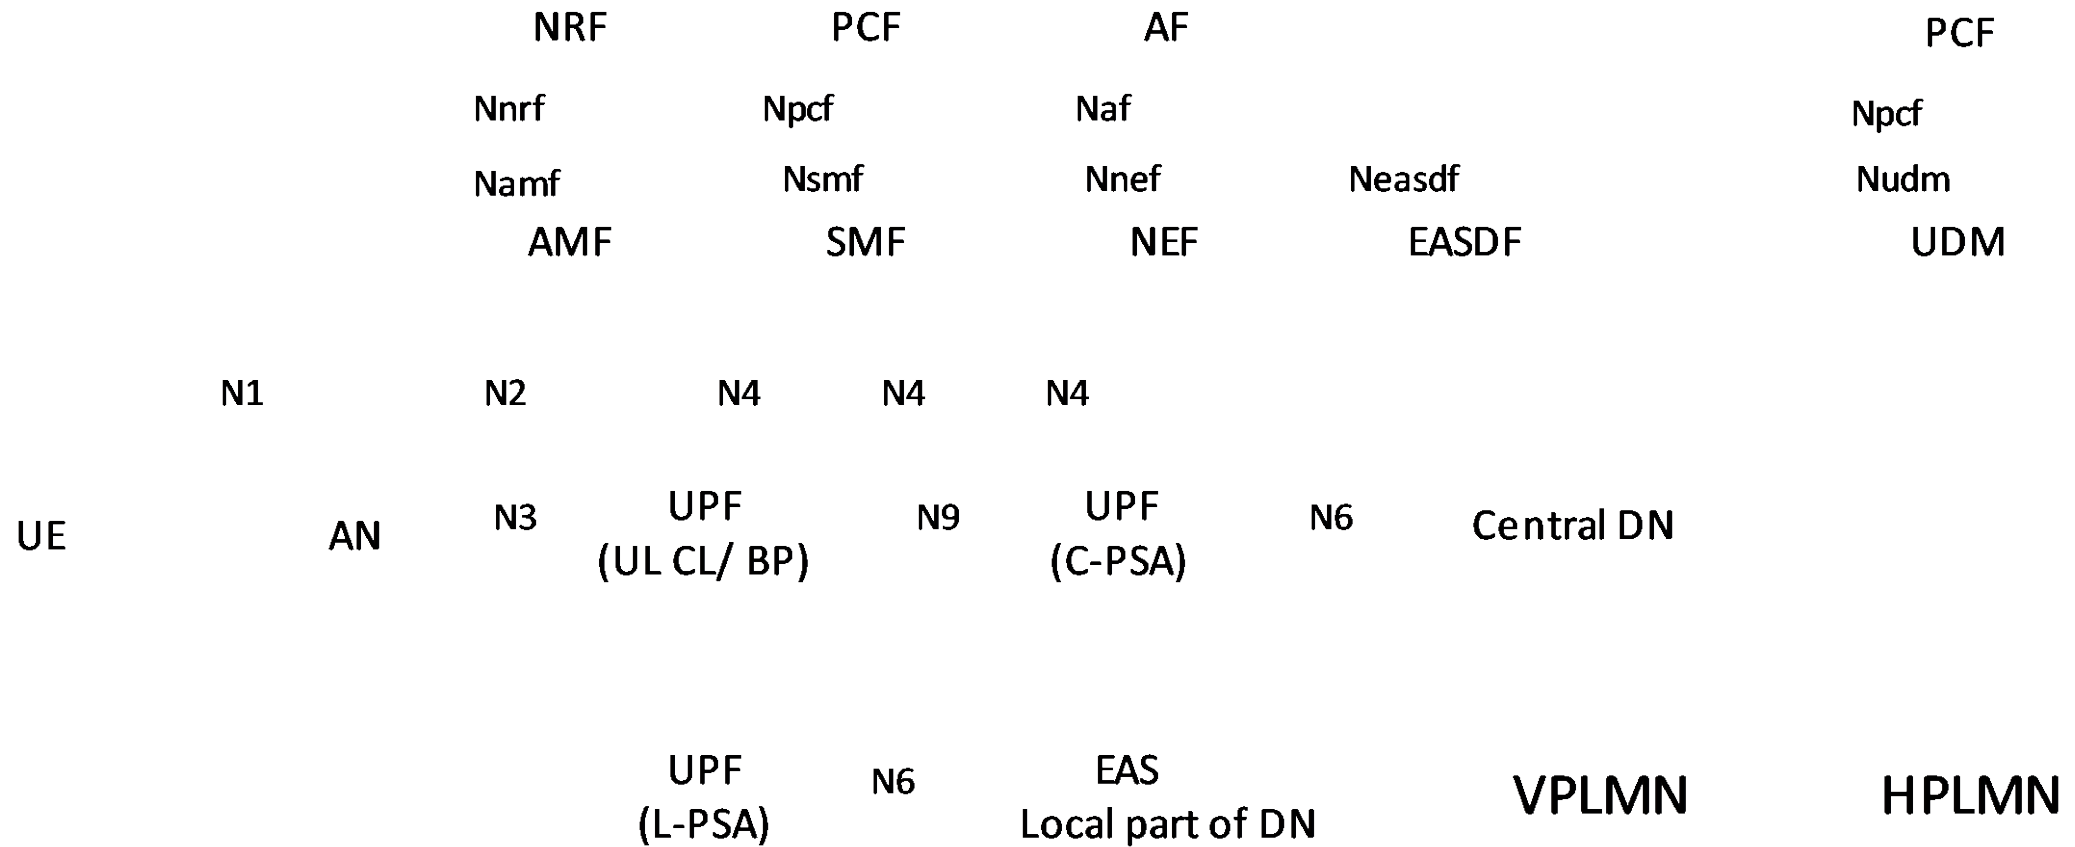

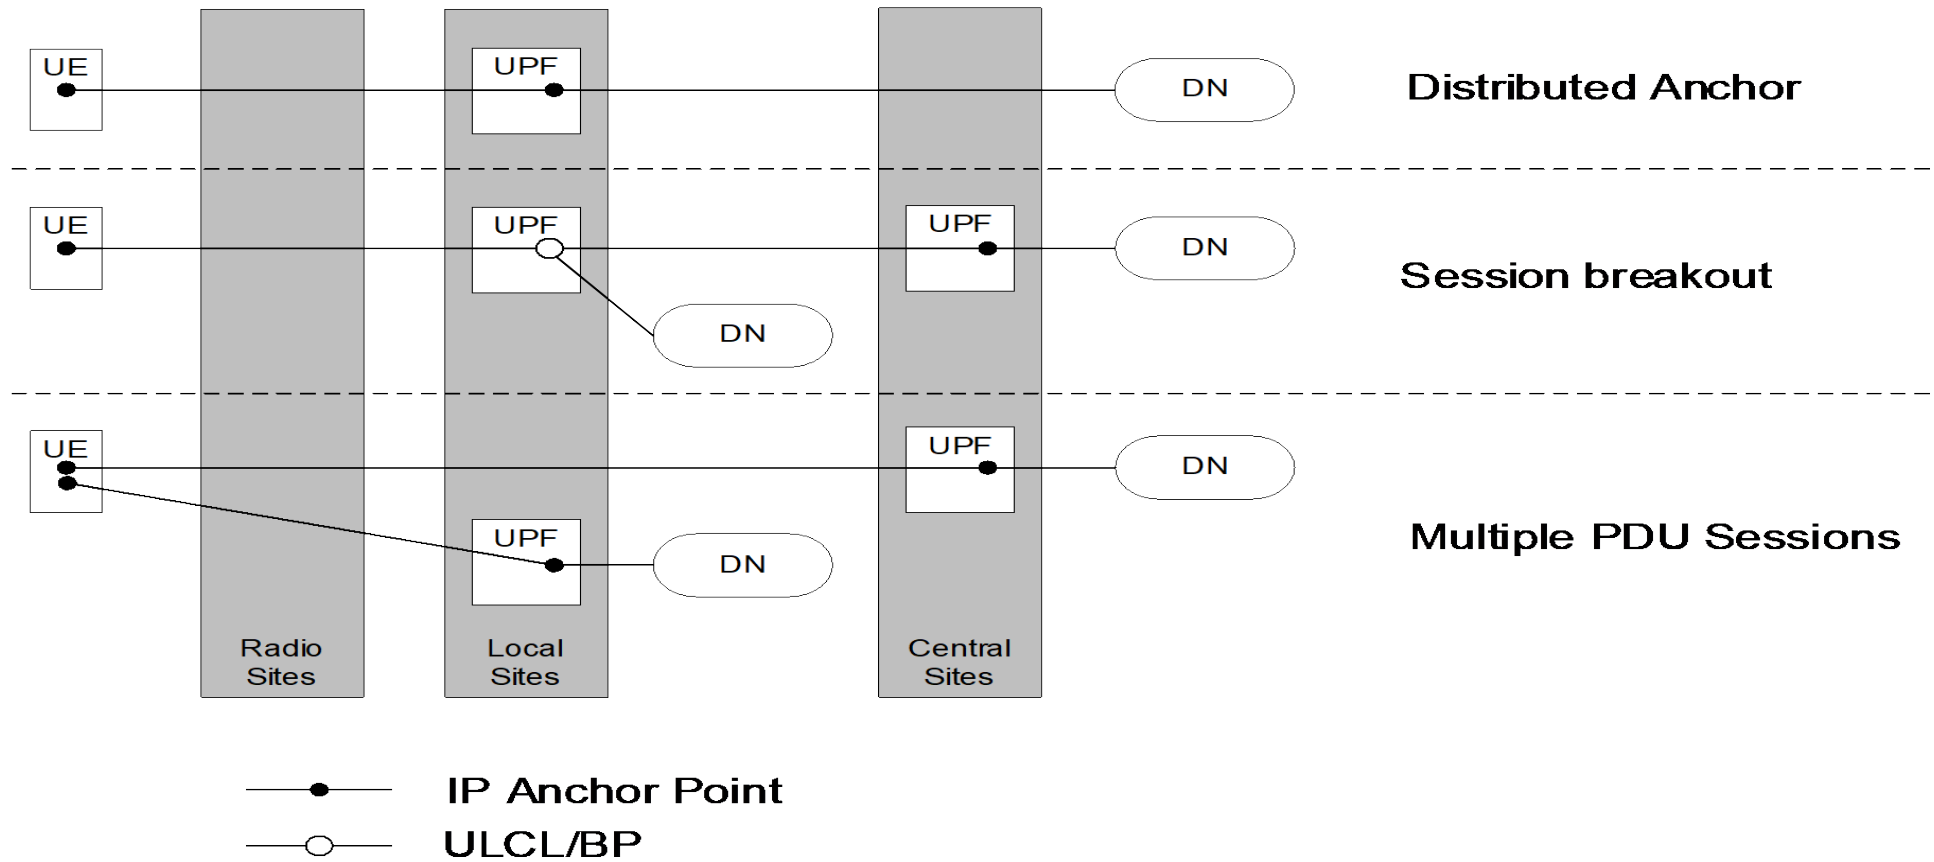

* Adapted from : Fog Computing: Principles, Architectures, and Applications, Amir Vahid Dastjerdi, Harshit Gupta, Rodrigo N. Calheiros, Soumya K. Ghosh, and Rajkumar Buyya

Edge Computing Continuum based on latency & processing needs

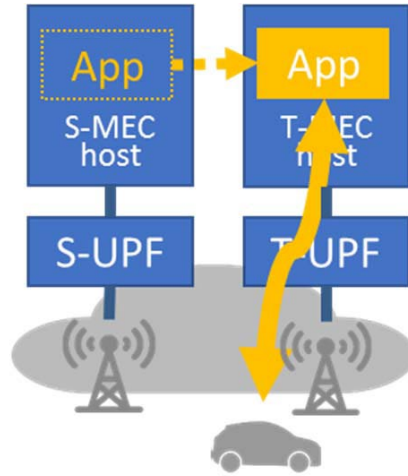

- Salient features in 3GPP 5GS supporting Edge Computing
 - Flexible placement of UPFs
 - Simultaneous connections to multiple data networks
 - Support for Multi-homed PDU Sessions
 - Enhanced Session and Service Continuity (SSC)
 - The Application Function (AF) can influence traffic routing for a given UE
- On going standardization effort in 3GPP for EC in Rel.17 specifications
 - Edge Application Server (re)discovery
 - Edge Relocation
 - Network Exposure to Edge Application Server
 - Enhanced support for Edge Computing in 3GPP architecture

(a)

(b)

Mobility Support with Target host supporting MEC applications

Mobility Support with Target host not supporting MEC applications

(a)

(b)

(c)

- Edge computing is delivering on its promise by significantly optimizing
 - Time-to-insight
 - Time-to-action
 - Cost-of-insight
- Enabling timely and effective decision making and opening new avenues of opportunities
- Standardization efforts in 3GPP, ETSI, IETF etc. facilitating further smoother integration
- To harmonize and accelerate progress of EC, all stakeholders should contribute to standards bodies and industry alliances
