Holographics Over 10G: Paving the Way for the Immersive Future

Austin Pahl
Software Engineer, CableLabs
a.pahl@cablelabs.com

COMING UP:

- ✓ Introduction to Immersive Media
- ✓ IDEA: The Immersive Digital Experiences Alliance
- ✓ Delivering Immersive Media: 3D Streaming

Types of immersive viewers

VR head-mounted Display

Multifocal head-mounted Display

3D Stereo Display

Full Holographic Light Field Display

Types of immersive capture

Depth Camera
(e.g. Time of Flight)

LIDAR

**Structured
Light**

**Camera
Array**

**Cameras
+ AI**

Light Field Displays are unprecedented

Traditional 2D Pixels

Holographic Pixels, "Hogels"

IDEA: The Immersive Digital Experiences Alliance

**IMMERSIVE DIGITAL EXPERIENCES
A L L I A N C E**

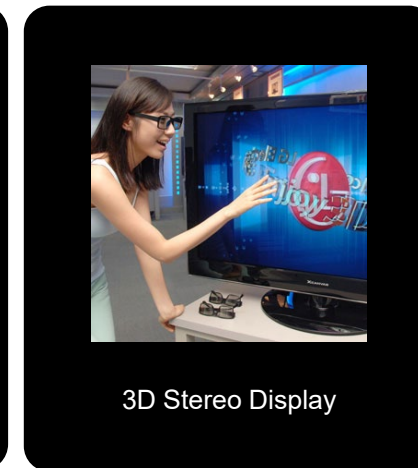

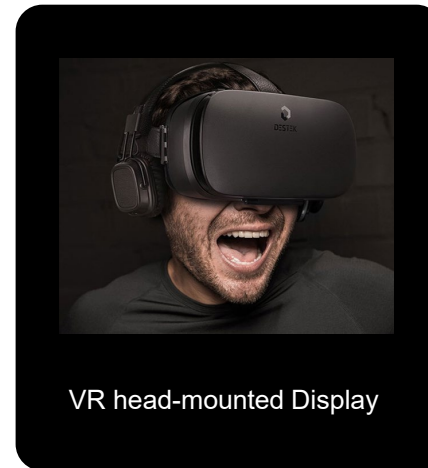

IDEA's Vision A Display Agnostic Approach

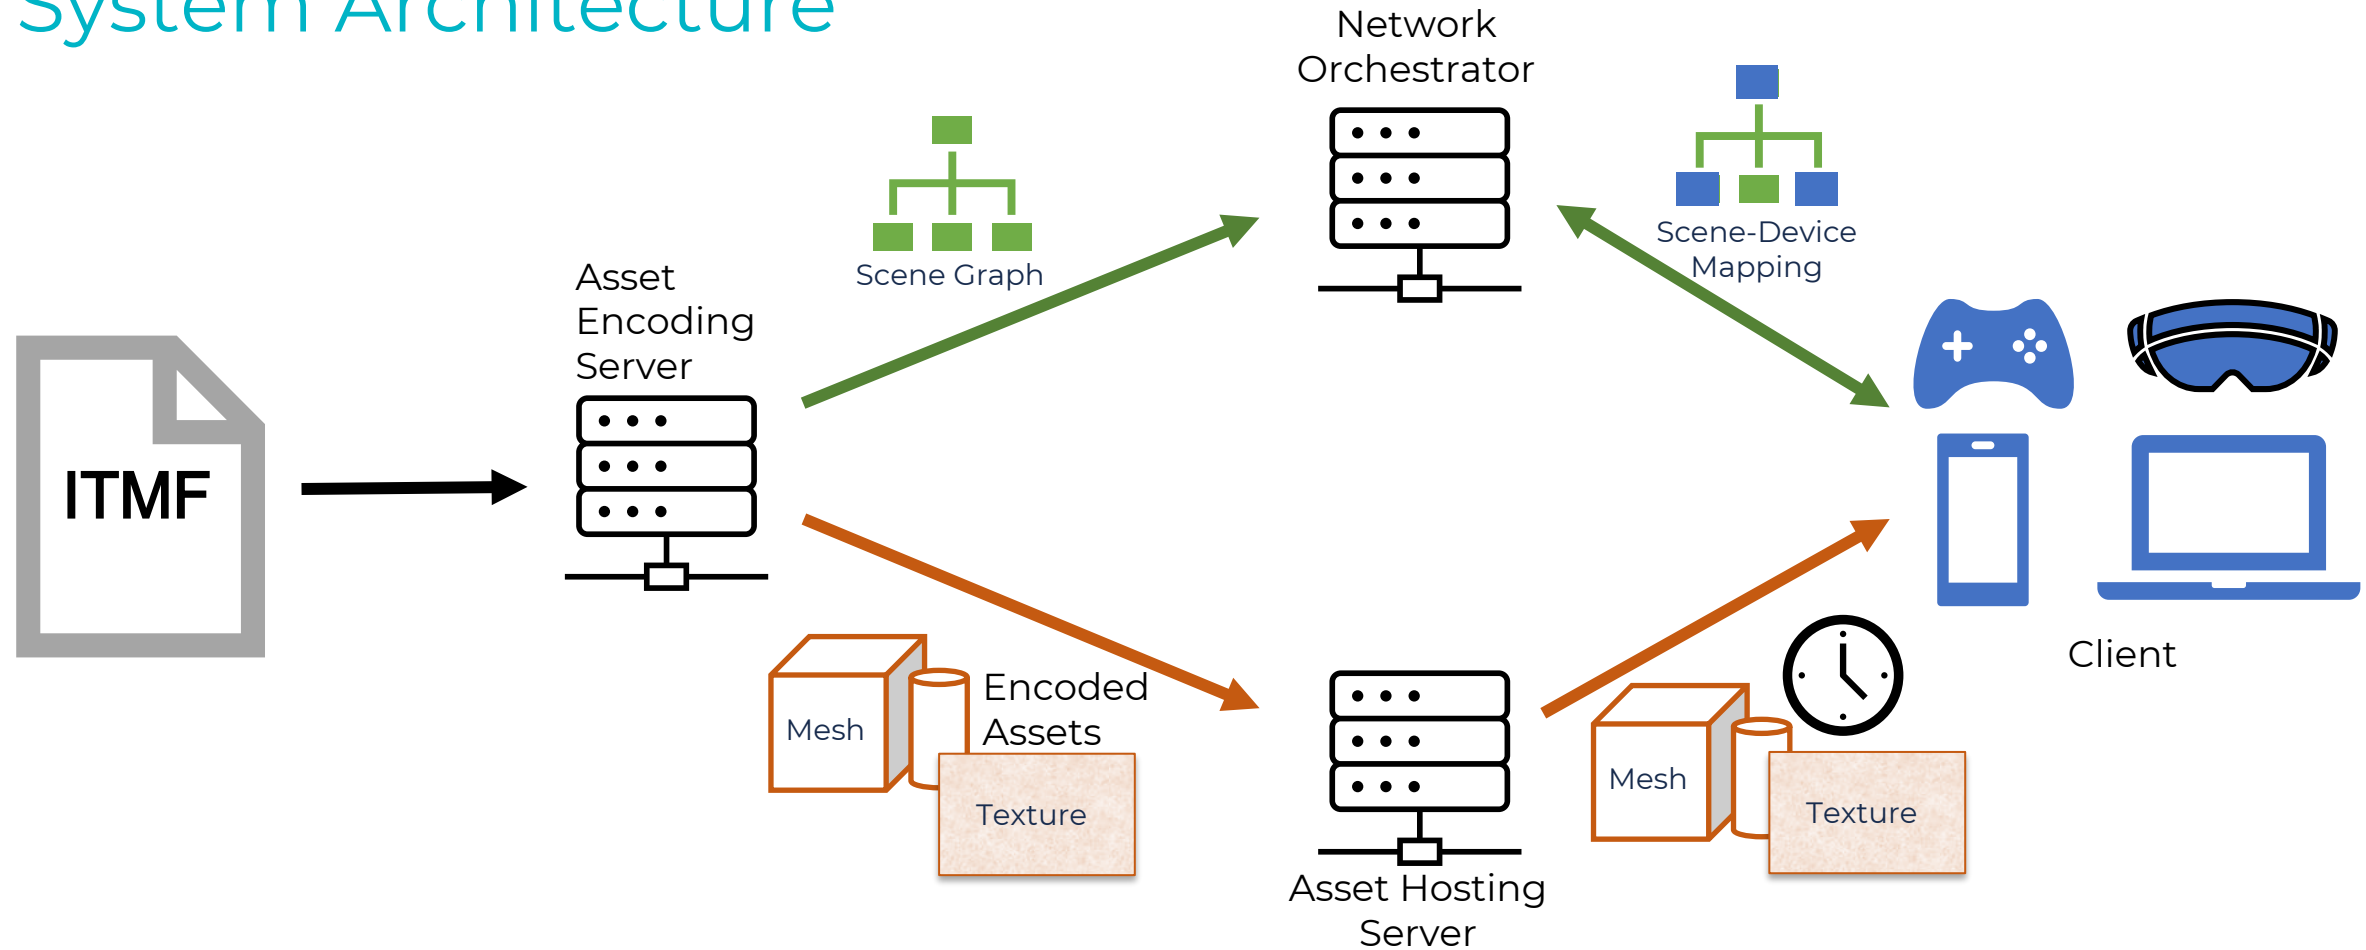

*Immersive
Technologies
Media Format*

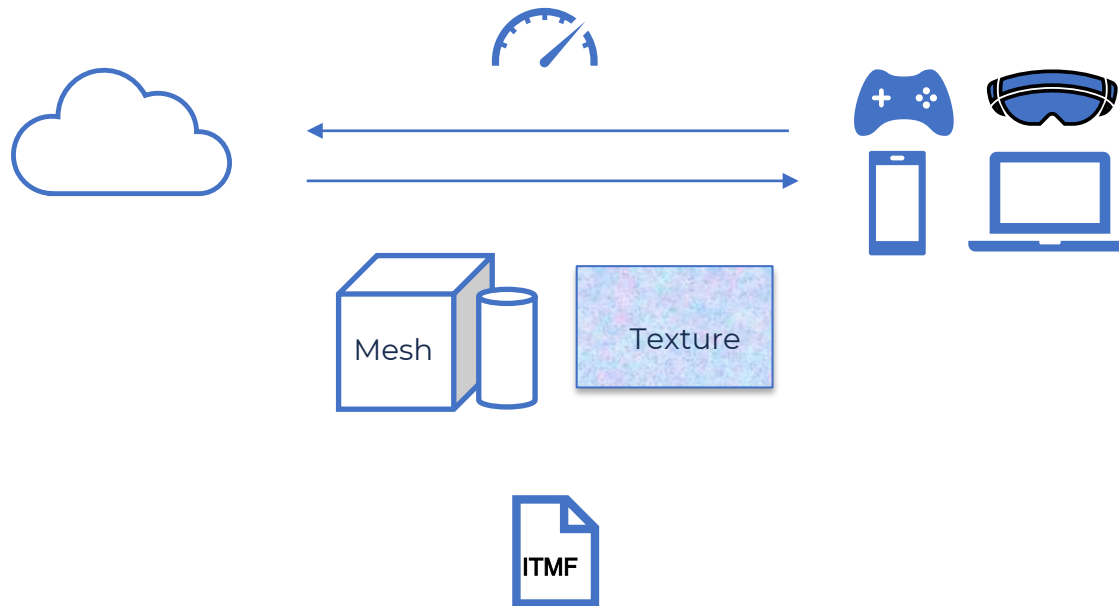

Media-Aware Network + Display-Specific Renderer

System Architecture

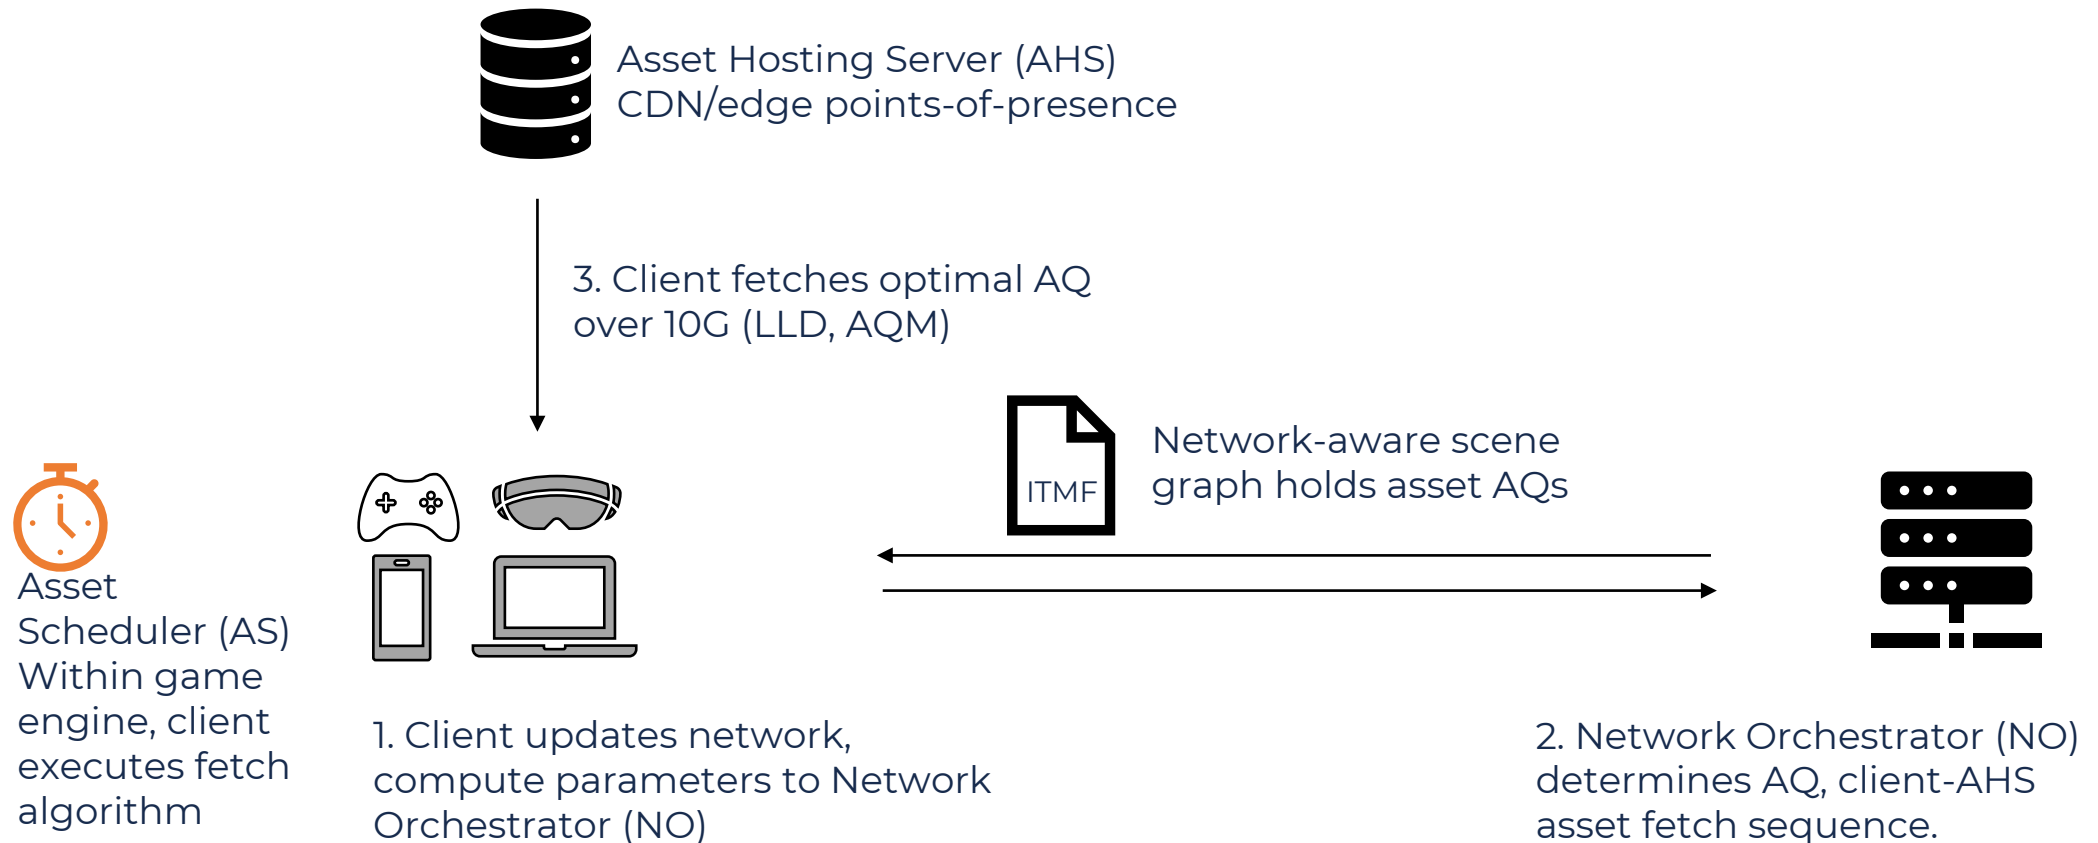

Intelligent Buffering

- 🎓 Intelligent buffering is defined as a client fetching 3D assets from content delivery network (CDN) servers in a network-aware order during runtime.
- 🧩 Network awareness: Enable cloud orchestration for scalable, adaptive streaming of 3D assets of different LODs, compression based on latency, BW.
- 🎯 Objective: Minimize fetch times and network traffic while streaming 3D content on heterogeneous platform.

Intelligent Buffering

Asset Scheduling and Compression

Network conditions
Latency, bandwidth
determine Asset Quality
(AQ)

Asset Scheduler
Optimize client-AHS
fetch latencies

Asset Fetch Call
Minimal impact on Quality
of Experience (QoE)

Compute capability
CPU memory, GPU memory,
encoding support for
immersive display units

Asset Quality
Provide optimal visual quality
under adverse network, compute
conditions

Delivering Immersive Media: 3D Streaming

Intelligent Buffering

- Need rich network awareness

Performance evaluation

- We built a dashboard to measure and enhance our approach to buffering

Streaming Metrics

Distributed Content for Edge Localization

Latency-Bandwidth Based Asset Selection

Asset Scheduler Minimizes Buffering Times

2D vs. 3D Downstream Traffic

Delivering Immersive Media: 3D Streaming

Edge Deployment

Low latency interactive use cases

- Cloud Gaming
- Metaverse

Distributed Content for Edge Localization

CDN Deployment

- Reliable
- Performant
- Scalable

Latency-Bandwidth Based Asset Selection

Asset Scheduling

Make decisions in real time by observing throughput and latency of asset transfers

Basic Approach

Latency threshold for LOD selection

Asset Scheduler Minimizes Buffering Times

Performance Evaluation

Criteria to analyze and compare future buffering algorithms

Asset Availability

Assets present on the client when needed

Transmission Time

Minimize total time transmitting assets

Delivering Immersive Media: 3D Streaming

2D vs. 3D Downstream Traffic

Existing Approach: "2D" Streaming

Excels at

Homogeneous displays

Existing resolutions

Short form content

Our Approach: 3D Streaming

Excels at

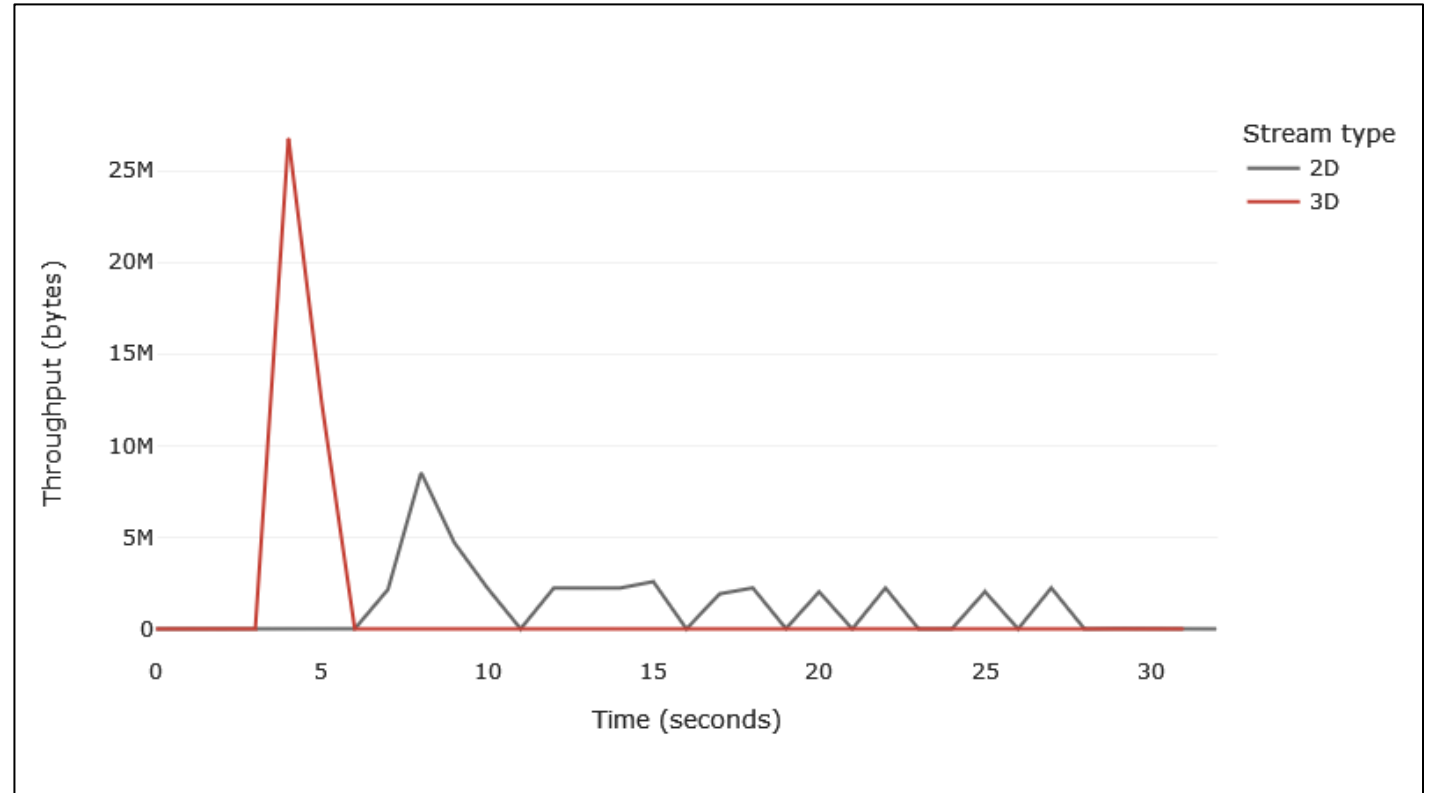

Heterogeneous displays

Future resolutions

Long form content

Split Rendering - Future Work

Mix 2D and 3D streaming to provide the best possible quality of service for every client.

Note: 2D video here is 1080p, h.264

Delivering Immersive Media: 3D Streaming

Together, these network metrics give us a **broad design space** to develop streaming solutions that **maximize quality of service** for immersive media

More to come soon!

Streaming Metrics

Distributed Content for Edge Localization

Latency-Bandwidth Based Asset Selection

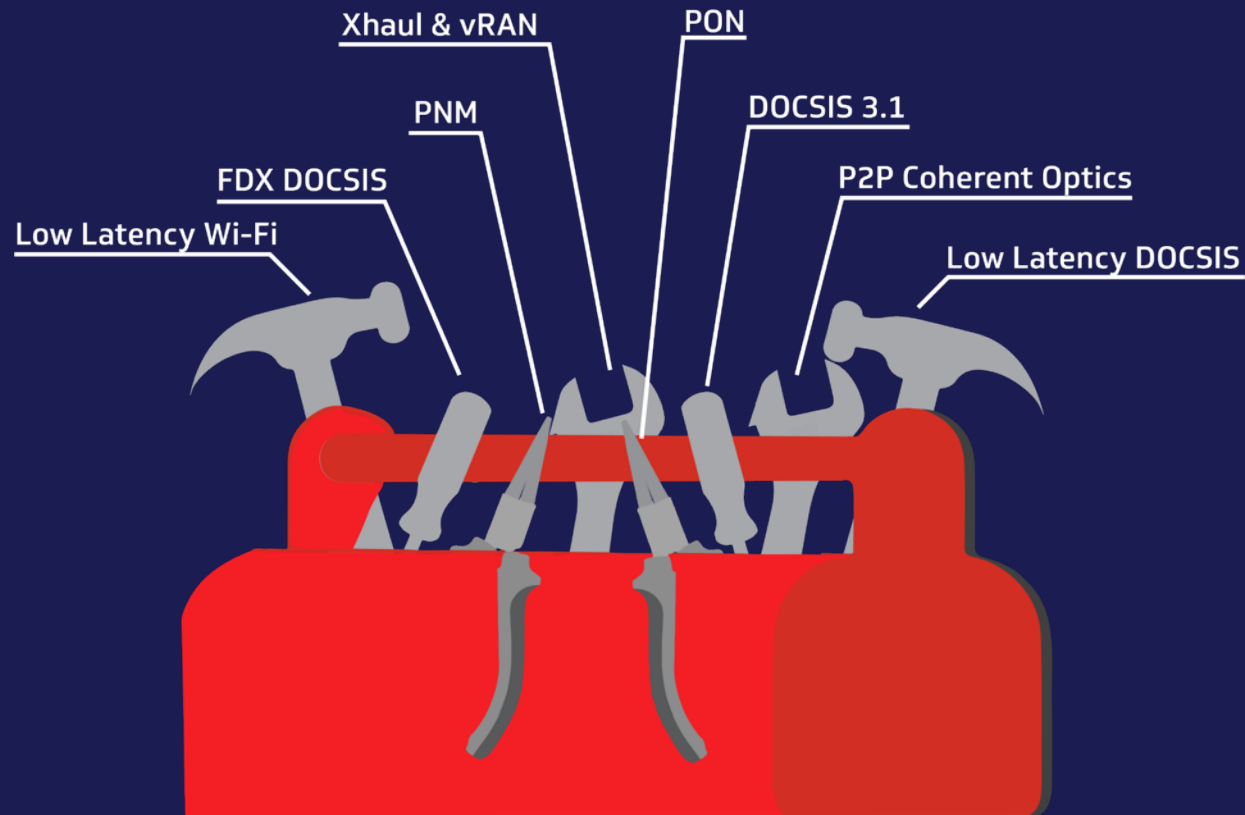

Asset Scheduler Minimizes Buffering Times

2D vs. 3D Downstream Traffic

10G

10x Speed

More Reliable

Better Security

Lower Latency

Creating Infinite
Possibilities.

Thank You!
