

**SCTE CABLE-TEC**  
**EXPO'13**  
OCTOBER 21-24 / ATLANTA, GA

**THE FULL (BAND) STORY:  
HOW SMART CPE WILL CHANGE HFC  
MAINTENANCE FOREVER**

**Jim Walsh**

Product Line Manager

JDSU

**Bruce Currivan**

Technical Director,  
Communications Systems  
Broadcom Corporation

# History of CMTS/CPE Polling

## Not A New Concept But...

- ▶ Historically Relegated To Secondary Role
  - And accessible only by a select few
- ▶ Historical Barriers To Widespread Usage
  - Service provision impact concerns
  - Bandwidth consumption concerns
  - Complexity of polling/interpreting responses

# Inflection Point: Pre-Eq Revolution

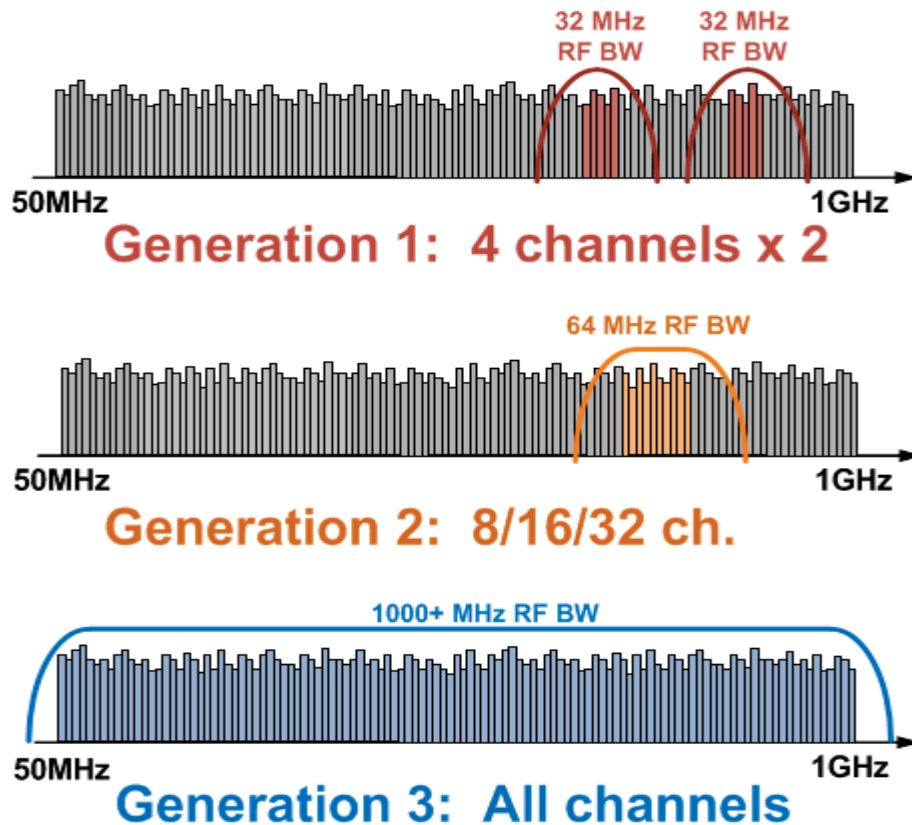

## The Breakthrough That Broke Through Barriers

- ▶ Published in 2008, 1<sup>st</sup> Implemented ~2009
- ▶ Result: Benefits >> Barriers
- ▶ Collaborative development aided ramp (PNM)
  - Rapid tool development/iteration
  - Deployment / Mgmt support lessons learned
  - MIB standardization

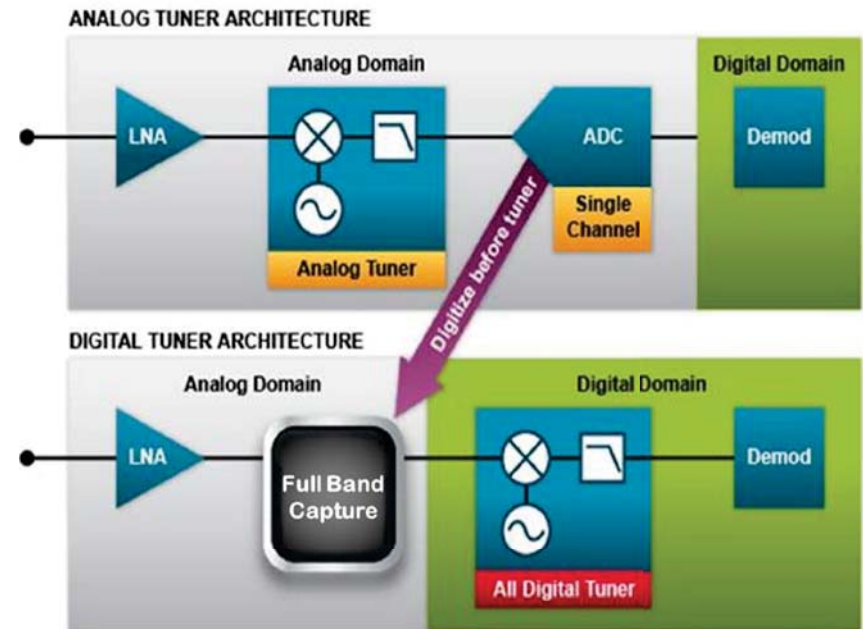

# Inflection Point: Full-Band Capture

## What Does “Full-Band Capture” Really Mean?

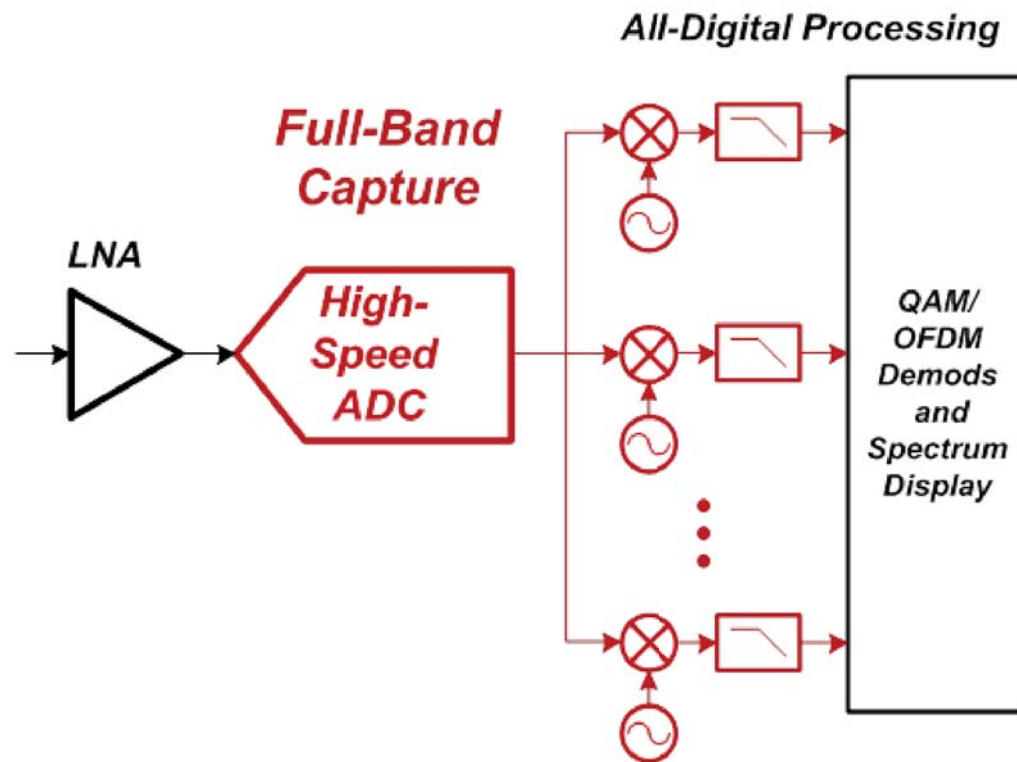

### Full Band Capture with All Digital Tuning

# Full Band Capture Front End

## High Speed ADC and Digital Filter Bank

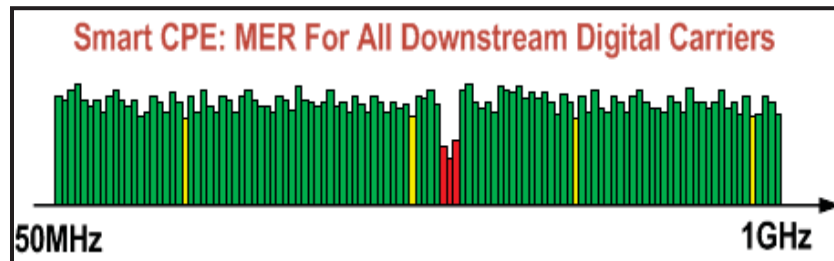

# Increased Downstream Visibility

## What New Capabilities Are Now Possible?

**Remotely Accessible Downstream Spectrum Analyzer Inside Subscriber Homes!  
Operates Non-Invasively – No Impact On CM/STB Performance**

**Remotely Accessible MER Values For All Downstream Digital Channels.  
Operates Non-Invasively – No Impact On CM/STB Performance**

# SmartCPE Should Be Unobtrusive

- ▶ Problems with sharing resources with DOCSIS functions:
  - Can degrade performance and/or move diagnostics to off-hours
  - Diagnostics less accurate: Cable and home networks lightly loaded during off-hours; temperature/wind less volatile in middle of the night; modem environmentals different
  - Typically not when customers are reporting issues
- ▶ Advantages of unobtrusive real-time/parallel operation:
  - Extends the capability to resolve issues while customers are on line and traffic/noise is consistent with reported failure
  - Typically do not roll truck at 3 AM

# Inflection Point

## CPE HW Breakthrough → Ecosystem Expansion

- ▶ Convergence of CPE and Test & Measurement Worlds
  - Faster implementation of T&M expertise into Smart CPE
  - Established field meter functions migrate to CPE
  - CPE polls replace truck rolls

# Benefits To Operators

## How Cable Operators Benefit from Smart CPE

- ▶ Detect Plant Weaknesses Before Customers Do
  - And know where to roll truck to begin searching
- ▶ Detect and Remotely Localize LTE/Off-Air Ingress
- ▶ Pre-Qual/Assess Self-Installs (using actual CPE)
- ▶ Target Preventative Maintenance
- ▶ Validate Fix Effectiveness *In Customers Home*

# Impact On Job Functions

## How Will Each Group Be Impacted?

- ▶ Field Tech: Shift toward proactive
- ▶ Tech Ops Mgmt: Unprecedented predictive visibility
- ▶ Installers: Improved install certification
- ▶ CSR/Tier I: Improved dispatch accuracy
- ▶ NOC: Increased # probes, see customer impact
- ▶ Management: New metrics to drive culture change

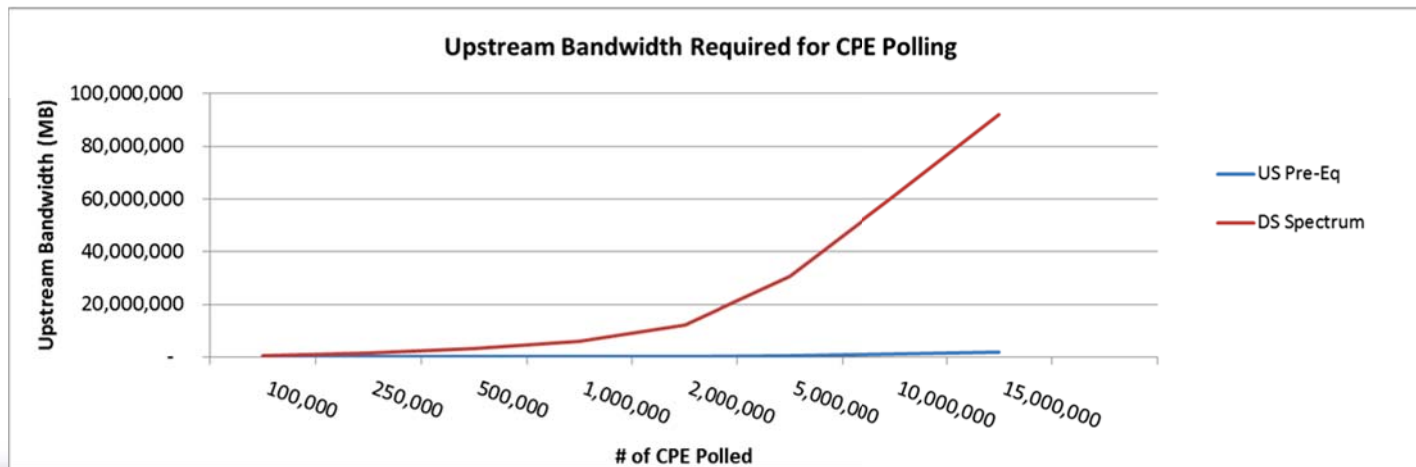

**Result: Improved Customer Satisfaction & Reduced OPEX!**

# Where Will We Go From Here?

## Capability Expansions: Legacy DOCSIS

- ▶ Continued evolution of back-end systems (DS)
- ▶ Continued feature migration: Field Meter → CPE
- ▶ Next-step automation within CPE
- ▶ Address impending data avalanche

# Where Will We Go From Here?

## Managing The Impending Data Avalanche

# Where Will We Go From Here?

## Designing Smart CPE Into DOCSIS 3.1

- ▶ Smart CPE test points:
  - Spectrum Analyzer functions
  - Vector Signal Analyzer functions
  - Network Analyzer functions

# Summary

## Smart CPE Have Changed The World

- ▶ Pre-Eq Revolution Started It All
  - Collaboration will continue to accelerate progress
- ▶ Smart CPE Will Continue To Get Smarter
  - As will the back-end systems that leverage them
- ▶ There Is Such A Thing As Too Much Data!
- ▶ DOCSIS 3.1 May Be Next Smart CPE Revolution
